

After a few discussions with locals, we reached the conclusion that Piatra Neamt needs a new park and the perfect place for that is the soon to be closed Zoo. We envisioned the park to have recycled furniture made up from recycled modular parts and self-powered by solar panels. Our main recycled materials would be e-waste, like PCBs. The recyclables are expected to come from the Zoo, company donated products that did not make it to the market, and donations from citizens. Also, our park would benefit from some tech innovations like electric smart bins, electric vehicle charging stations, Wi-Fi, smart eco toilets, making it a smart park. We would also have a bike renting hot spot in the park and bike trails around the area so people could enjoy more activities. We would encourage companies to hire locals, especially unqualified workers, so the local economy could have a boost. Lastly, we want to rely on companies in Romania to produce this furniture.
