More alternative routes. Improved Quality Life for Făgăraș Citizen's

The project aims to help the citizens of Fagaras to improve their quality life. Everyone knows what important is to eliminate the pollution from the cities, but for some of the cities it's quite hard due to missing infrastructure. This is the case also for Fagaras, but short-term solution was found. It's not enough to recommend to the authorities to build up new roads, this is already known, but what you can do is to try to use the actual infrastructure in the benefit of the people whom are living in the cities without infrastructure.

In order to think ahead, you have to think in different ways and also from time to time, it's good to think also vice-versa.... If it's not possible to strike out the heavy traffic from the city, let's strike the passenger cars traffic out from the city. More than that, let's think as an industry 4.0 and interconnect all the traffic lights from the city in order to create a good tempo for the crosswalks. To complete the industry 4.0 principles, let's share the information with the traffic participants. We proposed to share the information of the real traffic with Waze or Google Maps.

Less pollution in Fagaras city means a healthy life to the inhabitants. More information for the traffic participants means more healthy physical life for them.
